SAS Support Level seit 01/2020

Support Levels for SAS® 9.4, SAS® Viya® 3.5, and Earlier Releases

Support Level	Methods for Contacting Support	Activity by the Technical Support Team	Support for Executable Modules and Hot Fixes
Standard Support	Telephone Email Web Interface Technical Chat (where it is available)	Provides full support, including select security and defect fixes, for a software product release for five years from the product's General Availability (GA) date. This support includes investigating all submitted support requests and providing circumventions, whenever it is possible.	Provided for selected critical support requests.
Limited Support	Telephone Email Web Interface Technical Chat (where it is available)	Provides fixes where they are already available as well as access to the product documentation and self-help resources*. This support lasts until the software product is retired.	Provided where they are already available.

*Notes:

- Self-help resources include the SAS Customer Support and SAS Support Communities websites. Customers can search these resources for potential circumventions to issues that are similar to ones that they are experiencing.
- SAS uses the latest version of the standard CVSS system to calculate vulnerability severity. Select critical fixes for security issues in the CVSS 9.0 - 10.0 range will be provided for each release that is covered by Standard Support. In addition, select fixes for high, medium, and low security issues will be provided in the most current release of the software.
- To ensure that SAS customers have the latest security updates for SAS software, SAS recommends that customers install the most current release of the software, including maintenance and security hot fixes.

SAS 9 Content Assessment

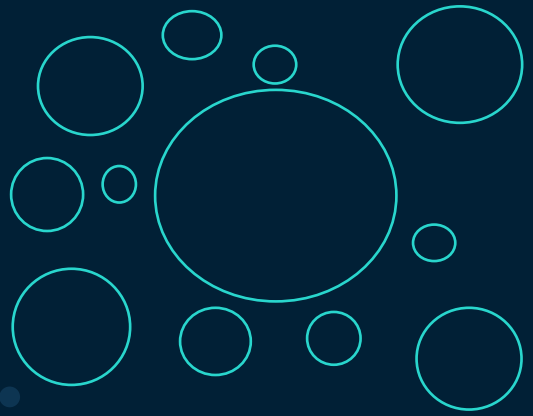
Kernfragen einer Migration

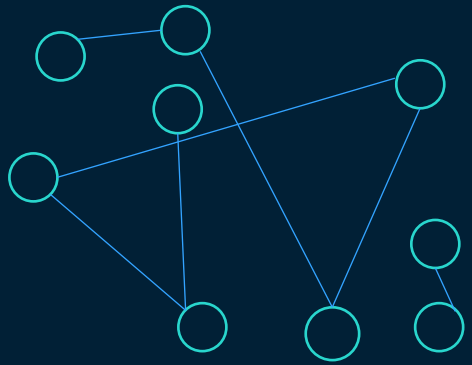
Was setze ich wie (oft) ein?



Applications

- Inventory
- Profile
- Gather SAS Code
- Summarize SAS Log Steps

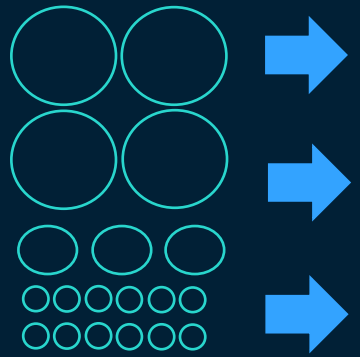
Wird mein Code auch in SAS Viya laufen?



Applications

- Code Check
- Code Check for Internationalization

Was ist der ideale Migrationspfad?



Applications

- Modify SAS Code
- Create SAS Packages
- Create FAR Packages
